

**Z70S**  
NEW LUXURY GENERATION

## We are ANTERA

We are a lift brand that takes creative design, intense innovation and uninhibited luxury and turns them into incredible home experiences.

Our secret as the star brand of the Cibes Lift Group is our exceptional customer experiences. In doing so, creating loyalty throughout a world of Antera owners.

We move the entire lift industry forward, away from stodgy and basic elevator design stuck in the 1990s and toward modern and sleek designs made for the home. We empower our people, our customers and our partners to think big, and to always strive for excellence and quality at every step of the way.

Our place is at the top, the logical goal for any lift company.

We strive to rise above.

# SAFETY FIRST

## European safety standards

We believe safety is paramount, and that is why every single one of our lifts is carefully designed to respect the strictest of European standards – and most importantly the EN81-41 and machine directive (MD 2006/42/EC). All of our lifts, regardless of design or model, offer the same level of unparalleled safety.

We never compromise on safety.

## 24 / 7 Service nationwide

We believe in the value of local. Beyond our 24/7 hotline, we keep an ample local supply of spare parts and have technicians on call around the country in case of emergencies.

In fact, we are so determined to be there for you in case of emergencies that we check if your elevator phone is active every day through a discrete ping, and alert you if it is not.

## Anti-Trap system for emergencies

As a home lift company, safety is our main concern.

This is why our lifts come equipped with an anti-trap system consisting of a battery-powered emergency lowering system in case of blackouts, a reset button, emergency manual openings and for our generation 5 lifts, a manual lowering directly from the pit!

We have you covered!

## Safety focused in-depth maintenances

Our maintenances are thorough and complex. Rather than a simple check, we make sure that every single safety function, including sensors, emergency stops, brakes and more is 100% operational.

More than simply extending the lifetime of your lift, our maintenances are a key part of our safety promise.

Relleaqua

Imperial Marble

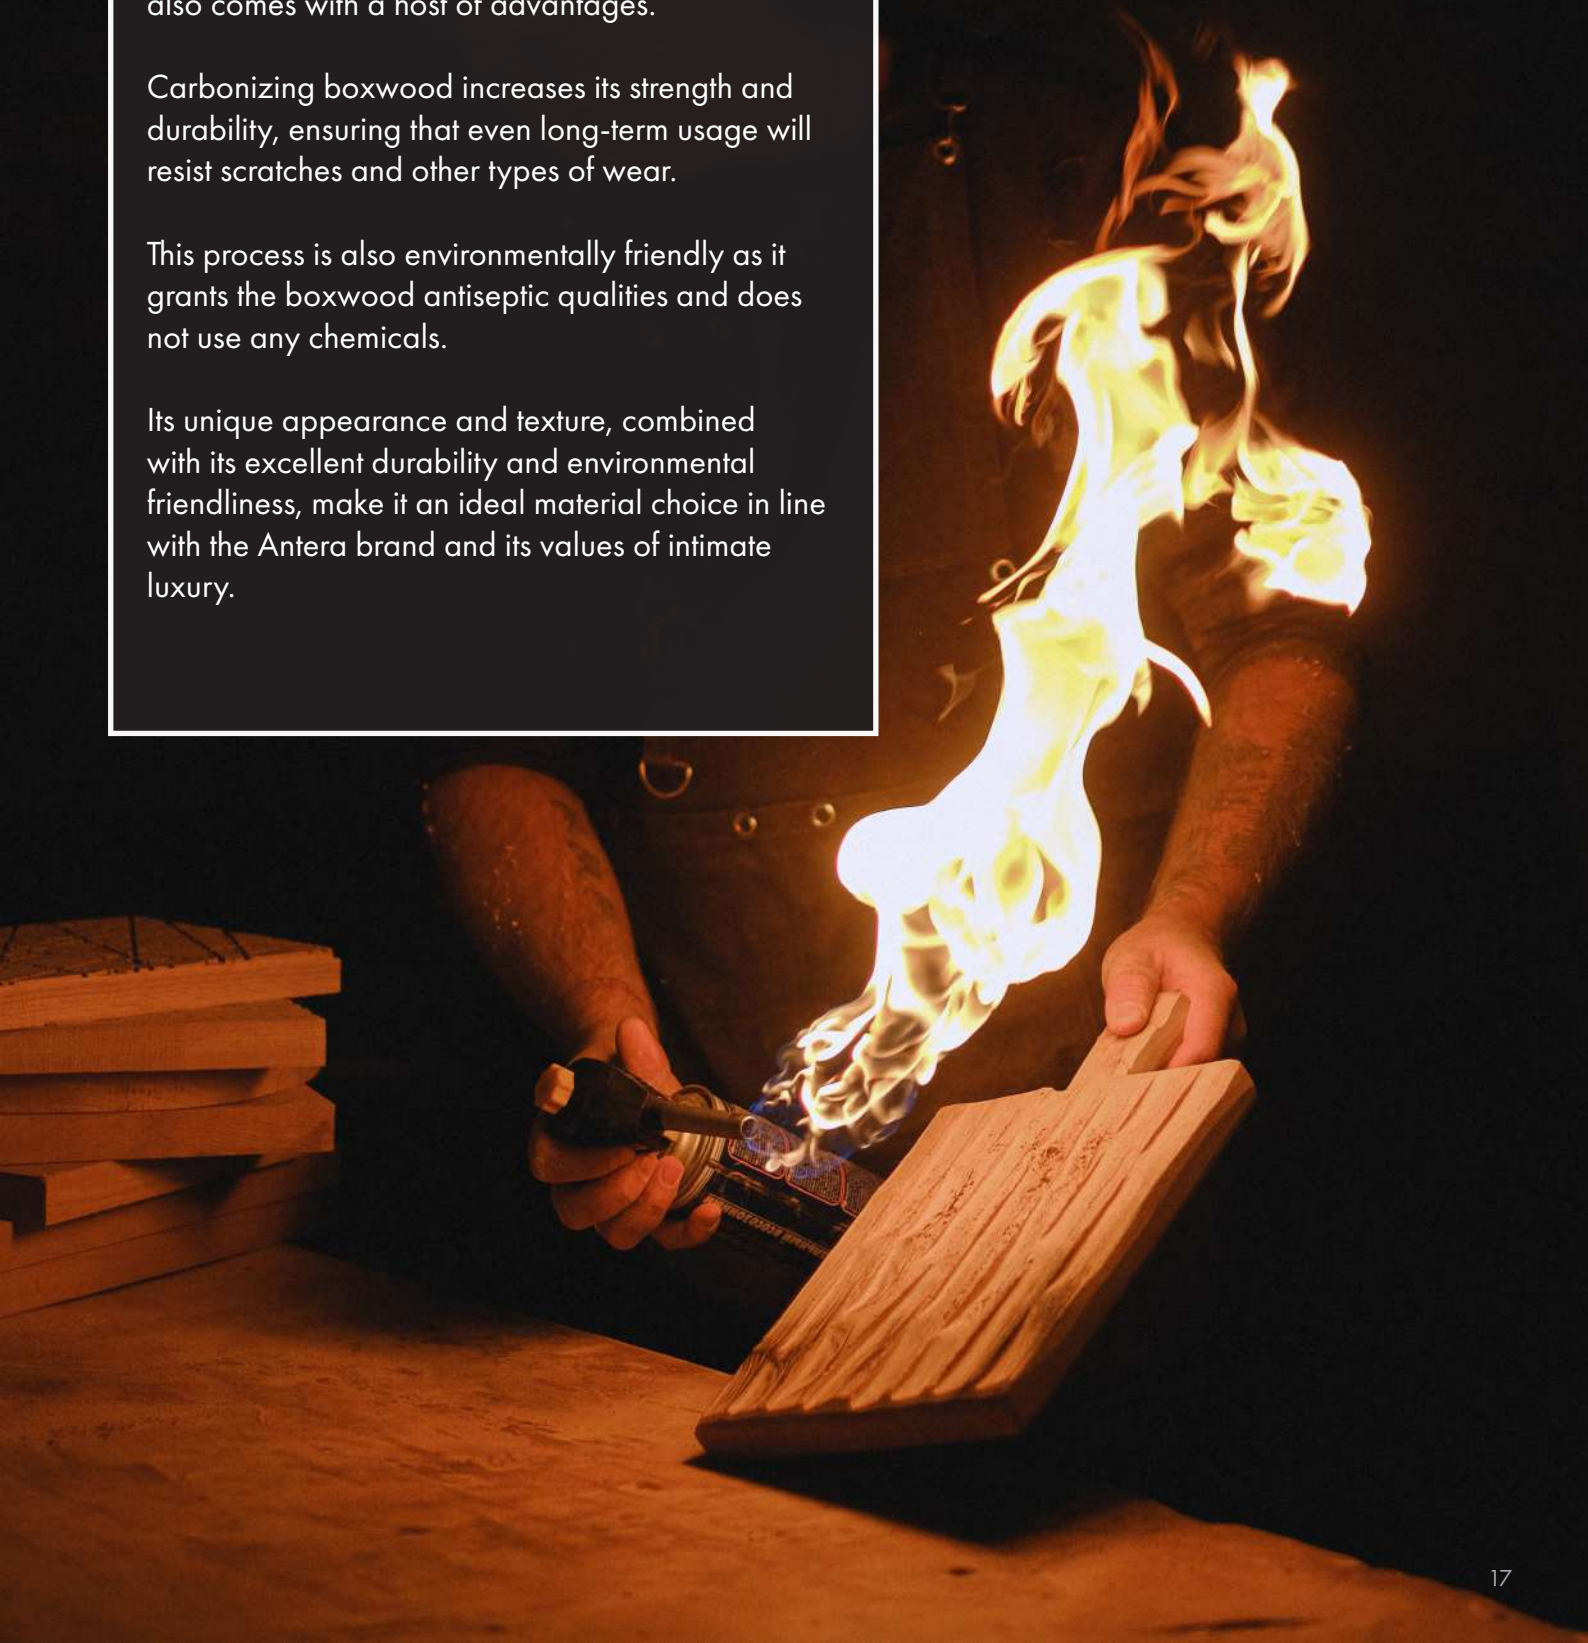

The Antera Carbonized Boxwood Design Wall is achieved by heat treating the boxwood immediately after carving.

This not only creates an extremely high-end feel, it also comes with a host of advantages.

Carbonizing boxwood increases its strength and durability, ensuring that even long-term usage will resist scratches and other types of wear.

This process is also environmentally friendly as it grants the boxwood antiseptic qualities and does not use any chemicals.

Its unique appearance and texture, combined with its excellent durability and environmental friendliness, make it an ideal material choice in line with the Antera brand and its values of intimate luxury.

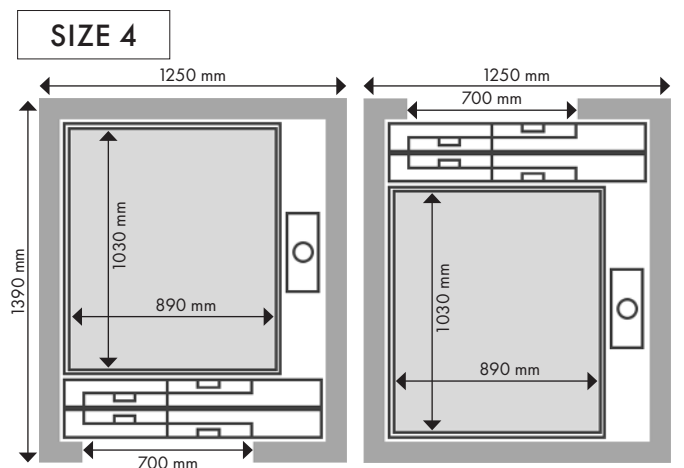

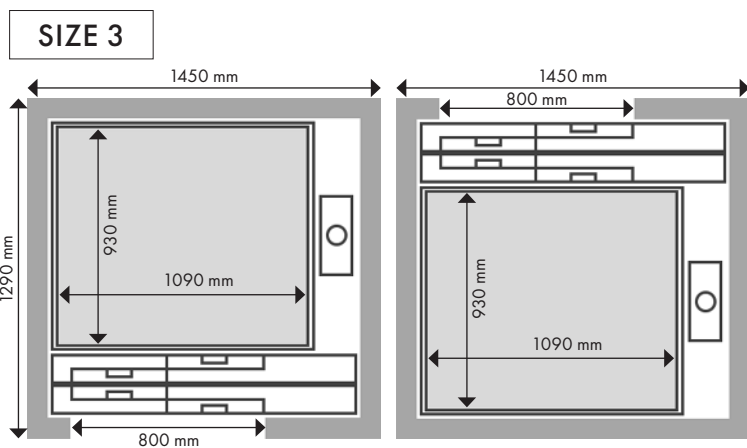

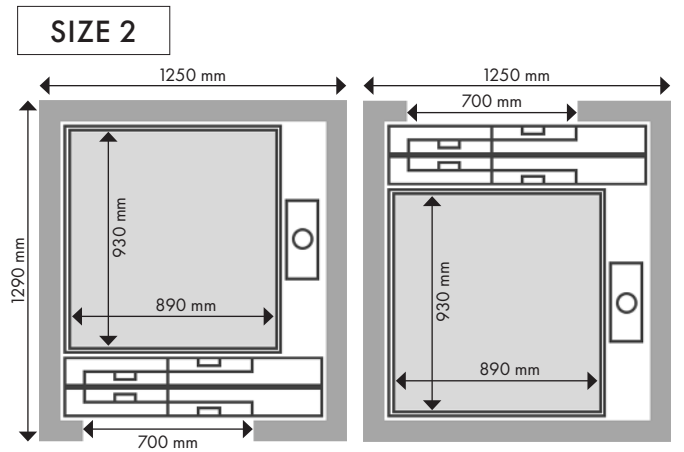

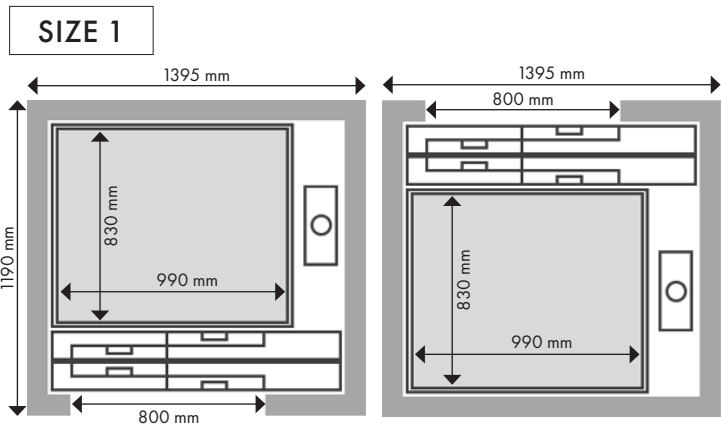

# TECHNICAL SPECIFICATIONS

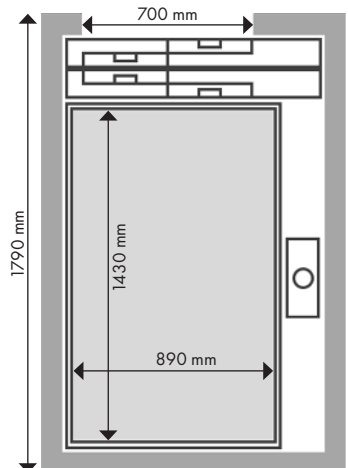

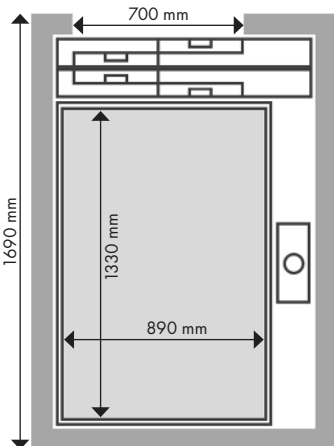

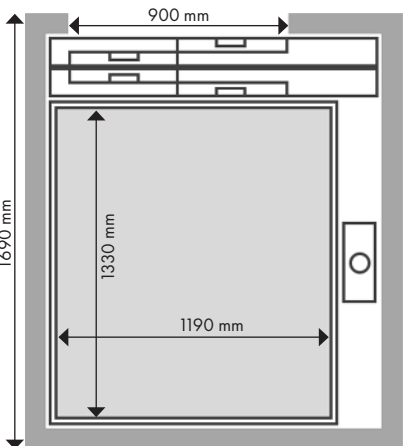

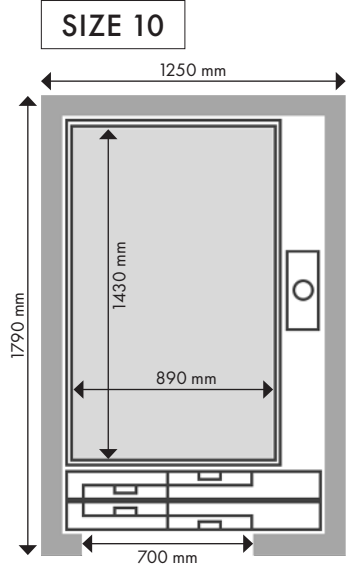

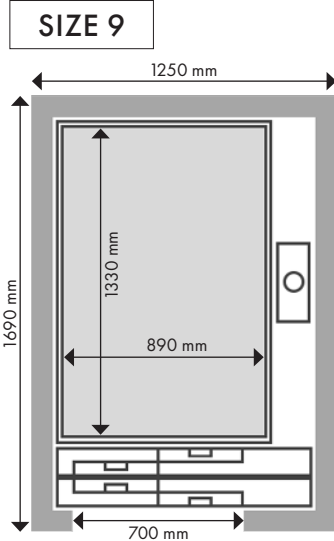

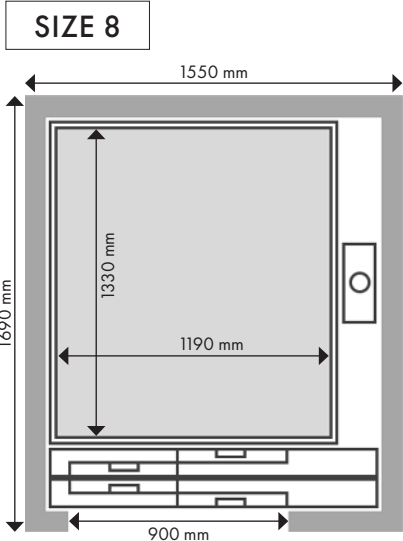

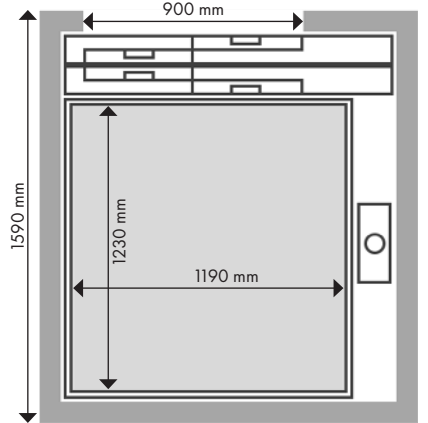

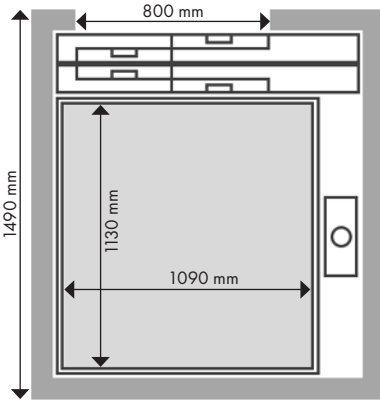

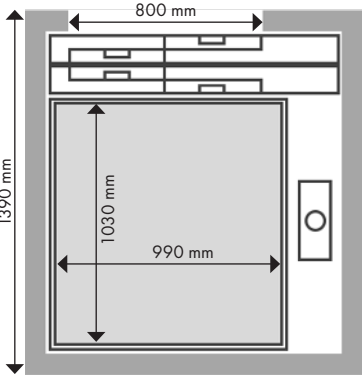

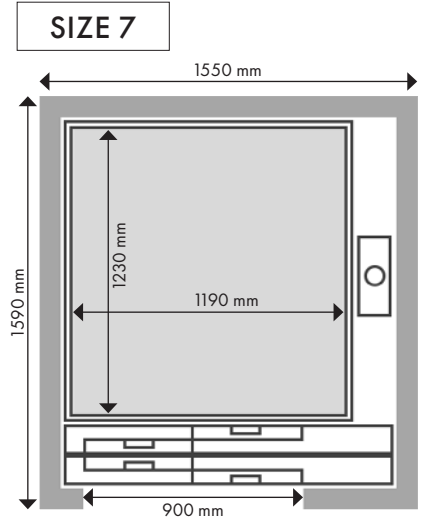

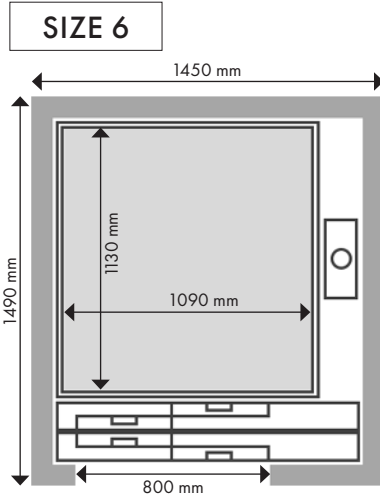

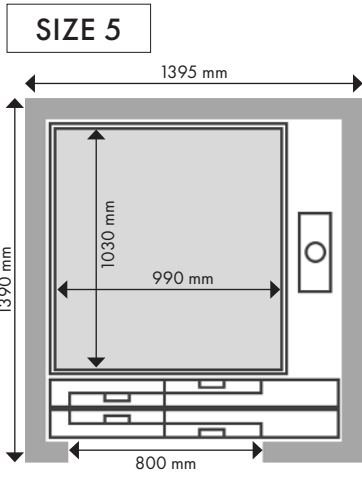

## PRODUCT DETAILS

Max #of stops	6 Stops
Max travel height	20,000 mm
Minimum height top floor	2,600 mm
Power supply	1 phase 220V / 3 phase 380V
Rated power	2.9 kW
